

Amendments to the Claims

Please amend claims 36-38, 41 and 42 as shown below.

36. (Amended) A computer implemented system for providing a directory of contact information associated with wireless communications devices comprising:

a network station adapted to carry out software-based instructions in the generation of a database system of the contact information for wireless communications devices;

a contact information gathering system adapted to implement a process to gather from one or more sources the contact information for one or more wireless communications devices, the contact information gathering system including wired means for the network station to interface with one or more wireless communications service provider stations to obtain contact information for one or more wireless communications devices; and

an exchange system which receives from said information [gather] gathering system and transmits the contact information for one or more parties upon request.

37. (Amended) The system of claim 36 wherein the wired means for the network station to interface with the one or more wireless communications service provider stations includes a router switch station for coupling said network station to said wireless communications service providers.

38. (Amended) The system of claim 36 wherein the wired means for the network station to interface with one or more wireless communications service provider stations polls the service provider stations one or more times per day at selectable frequencies to update contact information in the database system.

39. (Original) The system of claim 36 wherein said wireless communications devices are cellular phones.

40. (Original) The system of claim 36 further comprising means for enabling a device user to access the database to enter contact information and update said database system for access of particular individually created contact information.

41. (Amended) A method for providing a directory of contact information associated with wireless communications devices comprising the steps of:

gathering the contact information from one or more wireless communication device service providers through wired means;

generating a database system of the contact information; and

transmitting from said database system to one or more receivers upon request the contact information associated with one or more wireless communications devices;

wherein the step of gathering the contact information includes the step of interfacing with one or more wireless communications service provider stations to obtain contact information.

42. (Amended) The method of claim 41 wherein the step of gathering the contact information includes the step of linking said database system through wired means to said service provider stations through a router switch station.

43. (Original) The method of claim 42 wherein the step of gathering the contact information includes the step of polling said service provider stations one or more times per day at selectable frequencies for updates of the contact information.

44. (Original) The method of claim 41 wherein said wireless communications devices are cellular phones.
